

COMIC CRAFT — AI COMIC STORY CREATOR USING GEMINI MODELS

AI COMIC STORY CREATOR USING GEMINI MODELS

Date	30 September 2026
Team ID	SWTID-2026-8849
Project Name	Comic Craft-AI

Sample Project Documentation

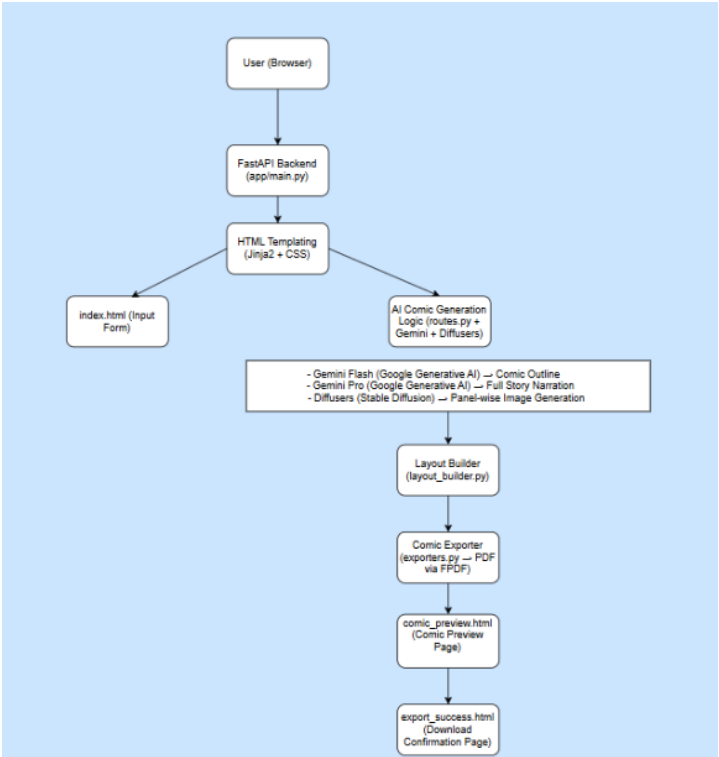

Project Description

ComicCraft is a web-based application that uses AI to generate personalized comic book stories and illustrations based on user-provided prompts. Built with FastAPI and integrated with Google Gemini AI models and Stable Diffusion, it automates storylines, dialogues and comic-style imagery, then presents the result in a browser and supports PDF export.

Scenarios

- Scenario 1: A user enters a prompt such as “A brave fox exploring an enchanted forest” and provides character, setting, tone and art-style preferences. The system generates a five-panel comic.
- Scenario 2: A user selects a funny tone and comic-book art style, then regenerates the comic using the selected preferences.
- Scenario 3: After reviewing the preview, the user exports the comic. `layout_builder.py` assembles panel content and `exporters.py` generates the PDF.

Technical Architecture

Project Workflow

Milestone 1: Model selection and Architecture — select AI models, define architecture and set up the development environment.

Milestone 2: Core functionalities Development — outline generation, story generation, image generation, layout building and PDF export.

Milestone 3: routes.py Development — implement browser and JSON routes and connect the AI workflow.

Milestone 4: Frontend Development — build index.html, comic_preview.html and export_success.html with Jinja2.

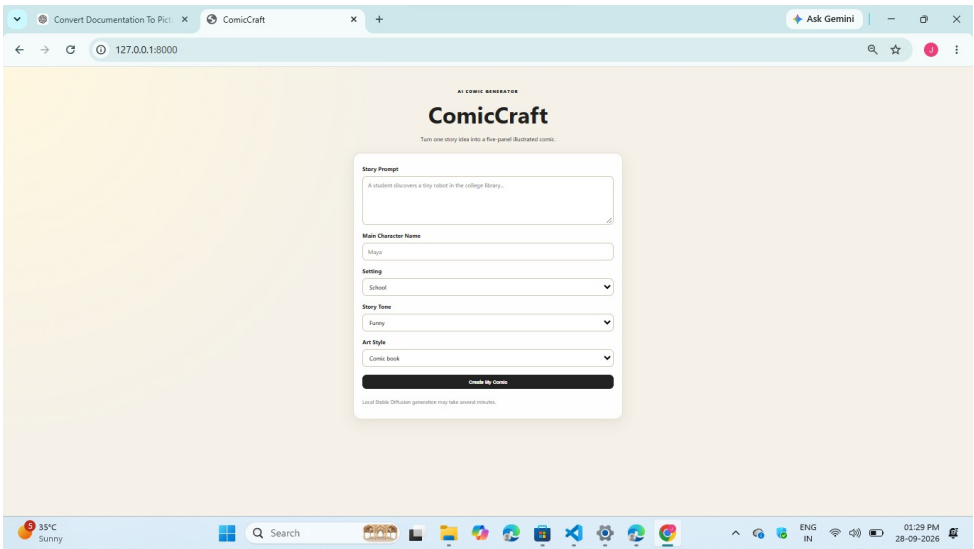

Milestone 5: Deployment — prepare the local environment, configure API keys and run the FastAPI server.
